Community Earth Project

and the

Community Earth Token

Info - Paper

Version: November 2022

The vision of the "Community Earth Project"

Our vision is easy to explain.

Our goal is to create a large community that will grow into one of the largest communities in the world.

As the name "Community Earth Project" suggests, this project will be a jointly managed project. The goal of the community will be to grow through many different projects and to make a difference with a large number of members.

<u>Different use cases are conceivable:</u>

These can be various projects, charities, crowdfunding or other topics. At this early point in time, it is still open where the primary purpose lies.

The vision arose from people who have already worked on other crypto projects.

These people will ensure a regular start until the members independently initiate their own projects.

The success of this project depends to a large extent on the number and participation of the members of the Community Earth Project.

Not only from the connected communities, but also from associations, social media groups, companies, etc. In principle, from everyone who is actively involved here.

Everyone can participate and grow with them.

The start is in the D-A-CH zone, but anyone worldwide can join.

In a large community, many things are easier to accomplish, such as organizing and working out the various projects and possibly also financing them, since everyone only has to make a small contribution.

Every member of the community can and may participate in all projects.

At Community Earth, everyone who participates in the community has a voting right on all platforms such as social media as well as on our current main platform “Telegram” and subsequently on our homepage.

Telegram: **COME Announcements**

- https://t.me/communityEarthChannel
- https://t.me/CommunityEarthDE
- https://t.me/CommunityEarthInternational (at work)

Open discussion groups, polls and votes will also be an important part.

The basis of this project are the people and their visions, which are to be realized together.

Social projects

The idea is that the "Community Earth Project" currency, COME, will be used in a wide variety of projects on behalf of the community.

Be it for environmental protection projects, projects for aid organizations, help for individual people in need, etc. the community wants to vote on it and stand up for it.

Our goal is to ensure that the help that is offered by the community arrives where it is needed. Whether this help consists of donations or voluntary work depends, of course, on the respective project.

Regardless of the form in which these participations will take place, the community will make joint, democratic decisions as possible about which project is supported.

Of course, the members of the community not only help each other with projects, but also their own projects are presented and organized by the various administrators of the group.

It is planned to build up various sources of income to finance the projects.

Promotion at "Community Earth Project"

No savings are made in advertising for the individual communities that participate in the “Community Earth Project”.

Because everyone who joins the community and participates in the community will be integrated on the homepage free of charge and can introduce their small / large community, group, association, company, etc.

Of course everyone can present their own vision / project. With the free advertising we offer, not only will small communities grow, but our community will continue to grow and achieve more.

There will be a separate homepage for the development of the projects and for the discontinuation of advertising, which is already being worked on.

Of course, there will also be paid advertising fields on our homepage, whereby this income is to be used for the further development and maintenance of the community. Our motto will be ...

... be part of the "Community Earth Project" (COME) to us!

The homepage

As of today, our homepage should become the main tool of our project.

On the homepage not only all projects and community advertisements are integrated, but also gradually tools that should / will help the community.

Who runs the homepage is currently still open. As soon as volunteers are found to work on the homepage project, work will begin.

In the beginning the homepage will only serve as an info point about our vision and for general information about our project as well as technical information about the "token".

As everywhere, the size of the community will again have a major impact on whether the project will be more or less successful.

Community Earth – Token

The token has the name **"Community Earth"** (short: **COME**) and it is planned that it will be used in the foreseeable future for the community in various projects.

This token is based on the technology of the Tron blockchain and is absolutely decentralizable and uses the features of this large blockchain. Since the community will not only participate in the various projects with fiat currencies, but also wants to get involved with its own currency, it was inevitable that "Community Earth Project" created its own token.
Subsequently, there will be various projects in which the COME token will play a major role.

Through the blockchain technology, the transactions are verifiable and therefore it is also planned to process the primary number of transactions via this token.
The integration of the COME token on various exchanges is the basis and therefore a basic requirement for our project. The goal is to generate an even stronger financing option for the individual projects or, alternatively, to be able to finance several projects with it.

The Tron blockchain was chosen because the very low transaction fees are another decisive factor for the large number of planned transactions. Another factor is the extreme speed of transactions that the token brings.

Since the COME token will be listed exclusively on official exchanges [a purchase via the association will not be offered], this should be appealing to traders, hodlers as well as all other self-responsible investors and the trading activity should be traceable, even more so since there will be continuously new stakings and other actions at the exchanges/blockchain for it. (e.g. burning of coins to generate a deflation of the currency).

Thus, the long holding period of the COME token should be more attractive to investors than permanent selling off.

Numbers, data, facts

There is a total of 100,000,000 COME, although this is greatly reduced over the years. (for more info on the burn, see below).

The creation, breakdown and temporary control of the token was handed over to a team of developers independent of the association's activities.

Once the full amount of tokens has been issued, neither the development team nor anyone else has control over the token's value. The coin is fully integrated into the Tron blockchain.

The COME is then in the sole possession of responsible investors. It does not matter how the token develops. It depends on the trading volume and thus on the willingness of investors to trade whether the COME becomes a success story.

The token was already listed in early 2021 as TRC10 token with a value of about $1 cent / about 40 satoshi and was tradable on the first exchange (IMBA is no longer current) at that time. (Value at the time of listing).

Inevitably, there was a swap from the TRC10 token to a TRC20 token at the Tron Blockchain. This was completed at the beginning of 2022 and you can swap the token to a TRC20 at Tronscan.

The contract and wallet addresses:

COME TRC10
TXyKYTofszNu5xu6kXtiGGCGijZ3zpBuhJ

COME TRC20 (Contract)
TXMdyszg7XyiVW98QyvwcBh71y7i4pytoH

Contract Overview – Token Exchange
TUdUrUz4udgig4zYFNh7k3AaNtyGxUBk1Y

DEX:

The COME token was listed on SunSwap, the largest TRON exchange (DEX). The largest trading pair on this DEX is COME/TRX. The listing was done at V1, V1.5 and V2.

Another listing was made with ISwap. ISwap is a new DEX that is being developed further and further. Also there our COME was already listed with the trading pairs

- COME/TRX
- COME/WIN
- COME/ICR
- COME/USDC und
- COME/BTC gelistet.

More pairs will be added later. With this DEX our Staking offers are also available. (see below)

Blockchain:

https://tronscan.io/#/

Wallet:

The Tronlink Wallet can be installed free of charge as an extension, e.g. in Google Chrome or in Brave Browser.

https://www.tronlink.org

Distribution of the entire token offer at the time of listing

● Token sale and initial stocking of the Exchange 15%

- to initially finance the project

● Token staking 20%

-staking is already available on the IMBA Exchange. The exact conditions can be found there - mining, farming and airdrops are planned for a later date

● Token to swap 40% - Swaping

-Swap of other coins / tokens, etc ...

● The development team and their partners receive a total of 15%

- Blocked until December 2021, afterwards distribution in small steps (minting) to the people involved and to everyone who has participated in activities up to then, as a thank you for the work

● The marketing budget is 10%

- Advertising and marketing budget

The COME Burning and Staking

The First Burning has started at the beginning of the year 2021.

Here is the Burning Plan for the next 6 years

• In 2021 2,500,000 COME will be burned per quarter, a total of 10,000,000 COME / year

• In 2022 2,500,000 COME will be burned per quarter, a total of 10,000,000 COME / year

• In 2023, 2,000,000 COMEs will be burned per quarter, for a total of 8,000,000 COME / year

• In 2024, 2,000,000 COME will be burned per quarter, a total of 8,000,000 COME / year

• In 2025, 1,500,000 COMEs will be burned per quarter, for a total of 6,000,000 COME per year

• In 2026 1,500,000 COME will be burned per quarter, a total of 6,000,000 COME / year

That's 48,000,000 COME that fall victim to the quarterly burn.

Furthermore, there will also be several Staking Burns, these amounts depend on the community.

The staking allows to burn the identical amount of tokens as in the action, also in the blackhole of TRON. This will have a deflationary effect on the currency in question, which should have a value-enhancing effect on the price. This could result in benefits for all owner-occupied investors. Holding the tokens could thus pay off.

The current Staking offer can be found at ISwap.

Staking at ISwap - Come to ISwap

- COME TRX/COME - 100K in COME

Burn quantity - 100K COME at expired staking time

- ICR/COME - 100K in COME

Burn quantity - 100K COME at expired staking time

- USDC/COME - 100K in COME

Burn quantity - 100K COME at expired staking time

- BTC/COME - 100K in COME

Burn quantity - 100K COME at expired staking time

- WIN/COME - 100K in COME

Burn quantity - 100K COME at expired staking time

These staking variants use the LP token, which is automatically generated by the Liquid Pool. The staking period is 180 days, and can be canceled at any time if someone wants to. At the beginning of each Staking there are 100,000 COME in the entire Staking Pool.

The more shares you have, the more COME you will reap.

Furthermore, a staking fee of 5% of the deposit is deducted in order to return it to 100% of the liquidity.

The COME Association was not founded to make profits, but to support the community and the COME Token as much as possible.

Cumulatively, the "COME Burning/6 Year Plan" results in a total of 48,000,000 COME. The burning sums from the individual staking actions are still to be added. Thus, the exact burning sum can only be determined at the end of the 6-year plan.

Additional burning and staking activities are planned, but must be carried out in coordination with all other activities. Thus, these cannot be described and evaluated in more detail at the moment.

The tokens required for burning will be taken from the various accounts/wallets in equal parts.

Once all COME tokens are fully owned by owner investors, the development team will need to end initial support. From that point on, all actions will be fully decentralized via the blockchain and exchanges.

Roadmap

The current roadmap can be found at our homepage.

Closing word

“Community Earth Project” currently consists of people who work on this project on a purely voluntary basis.

The information should be visible to everyone.

Since, in contrast to other projects, the "Community Earth Project" only initially plans to get the project up and running, no one will subsequently be held responsible if an individual or collective project does not bring the desired success, since this is not in the hands of the founders and success or failure is always to be assessed very individually and this cannot be achieved with the number of different topics.

There is no standard evaluation matrix from which a project success evaluation can be quantified. Even if the project founder cannot influence the project result and/or cannot agree to the result or is dissatisfied with it, contributors are excluded from any liability and are to be released.

An investment in the individual projects and topics is always at the investor's own risk.

Disclaimer

No liability is assumed for the handling of the crypto currency COME or others.

The administrators of the COME community will never advise buying/selling cryptocurrencies or recommend trading with them.

If individual members of the community speak out in favor of this, or if recommendations emerge from their correspondence, this has not been agreed with those responsible for the association, the company owners or the administrators. As soon as such publications become known, the community administrators will immediately remove the corresponding correspondence from the social networks.

We therefore distance ourselves from such statements and recommendations.

Any purchase or sale of cryptocurrencies should be well considered and is always and entirely at your own risk.

Investing in cryptocurrencies is extremely risky. Therefore, everyone has to decide for themselves whether and to what extent they make such investments.

The community and/or people working on it voluntarily cannot be held liable for a possible failure of the stock exchanges, nor for a possible drop in prices.

Please also note the respective age limit for buying or selling cryptocurrencies! Please also inform yourself at the respective stock exchanges and public sources about possible risks that can arise with a crypto purchase or with an investment in general.

The **COME-Community**
